DETAILED ACTION

Remarks

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5 December 2006 has been entered.
2. In response to communications filed on 1 January 2007, claim(s) 5, 9, 19, 25 and 29 is/are cancelled and claim(s) 1, 7, 11, 17, 21 and 27 is/are amended per Applicant's request. Therefore, claims 1-4, 6-8, 10-14, 16-18, 20-24, 26-28 and 30 are presently pending in the application, of which, claim(s) 1, 7, 11, 17, 21 and 27 is/are presented in independent form.

Allowable Subject Matter

3. Claims 1-4, 6-8, 10-14, 16-18, 20-24, 26-28 and 30 are allowed over the prior art made of record.

4. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record, Thusoo et al. (U.S. Pat. No. 7,016,903), do not disclose, teach, or suggest the claimed limitations of (in combination with all other features in the claim):

"wherein input duplicates are appended to the first structure and index entries for the input duplicates are stored in a second structure, wherein an insert row is a row to be added to the first structure and an update row is an update to an existing row in the first structure, wherein input duplicates are duplicate input rows having a same primary key value", as claimed in claim 1 and claimed equivalently in claims 7, 11, 17, 21 and 27.

These aspects of the instant invention relate to the manner in which update rows are handled. In the prior art, database tables usually enforce "referential integrity", a well-known concept in the art of database programming that requires every row in a table have a unique index key. In the case of the instant invention, different versions of input duplicate rows may occur multiple times in the first and second structure. This behavior "breaks" the referential integrity constraint, and provides a novel aspect to the invention.
